

# 1st Choice for Quality and Value

**VinylEFx**

**Safe-Glo**

## **Safe-Glo**

### **Phosphorescent and glittering films**

Safe-Glo (R) film consists of a rigid PVC copolymer with an incorporated second surface of inorganic zinc sulfide phosphor, a non radioactive, non toxic photo chemical light source. In the case of Sparkle-Glo (R), transparent polyester particles are harmoniously dispersed within the second surface; four different color hues are offered. A smooth top surface ensures conventional printing and die cutting, even thermal. Factory sheeting is available

### **Products available**

Economy grade (15 min glow)

Specification grade (1hr15 min double intensive glow)

### **Roll sizes**

381mm punched

610mm
